

WHAT IS CLAIMED IS:

1. An electronic apparatus, including:
 - a liquid crystal device manufactured by a method for making the liquid crystal device, the liquid crystal device comprising:
 - a pair of substrates for enclosing liquid crystal; and
 - a plurality of filter elements aligned on at least one of the substrates, and the method comprising:
 - moving at least one of an inkjet head and the substrate in a first-scanning direction relative to the other, wherein the inkjet head has a nozzle line comprising a plurality of nozzle groups, each nozzle group including a plurality of nozzles;
 - selectively discharging a filter material from the plurality of nozzles to form the plurality of filter elements; and
 - moving at least one of the inkjet head and the substrate in a second-scanning direction relative to the other so that at least a part of each nozzle group is capable of scanning a same section of the substrate in the first direction.
2. An electronic apparatus, including:
 - an electro-luminescent device manufactured by a method for making the electro-luminescent device, the electro-luminescent device comprising:
 - a pair of substrates for enclosing liquid crystal; and
 - a plurality of filter elements aligned on at least one of the substrates, and the method comprising:
 - moving at least one of an inkjet head and the substrate in a first-scanning direction relative to the other, wherein the inkjet head has a nozzle line comprising a plurality of nozzle groups, each nozzle group including a plurality of nozzles;
 - selectively discharging a filter material from the plurality of nozzles to form the plurality of filter elements; and
 - moving at least one of the inkjet head and the substrate in a second-scanning direction relative to the other so that at least a part of each nozzle group is capable of scanning a same section of the substrate in the first direction.
